

**FREE ROPS RETROFIT KIT AVAILABLE FOR LAZER Z® MOWERS
MANUFACTURED BEFORE 2004**

Operating a zero-turn riding mower, particularly around ponds, sudden drop-offs, and steep slopes, requires extra diligence to avoid accidents or rollovers. As a leading manufacturer of commercial riding mowers, Exmark is committed to your safety and wants to make certain you are aware of the potential for serious injury or death when products are not operated properly around such hazards.

Rollover Protection Systems (ROPS), in combination with seat belts, are shown to be effective in reducing serious injuries or death if equipment overturns. ROPS are standard equipment on Exmark Lazer Z commercial mowers manufactured in 2004 and later.

Owners of Lazer Z's manufactured before 2004 (Serial Number 440, 000 and lower) can obtain a free ROPS (transportation fees may apply).

Simply contact your local Exmark dealer with the model and serial number of your unit to arrange installation of your ROPS today.
