

Z TURF EQUIPMENT

PROFITABILITY, PERFORMANCE AND VERSATILITY.

From aeration to spreading and spraying, the Z Turf Equipment brand encompasses an innovative line of turf management products that provides the versatility and profitability that your business needs. Built with the durability and reliability you've come to expect, it's time to see how the ZTurf Equipment line-up can be the perfect addition to your business.

TAKE ADVANTAGE OF THESE OFFERINGS.

FLEET

Loyalty does have its rewards as you'll receive discounts and extra benefits for purchasing multiple units.

FINANCING

Purchasing ZTurf Equipment products is easy and affordable with special Z Turf Equipment finance promotions available through your participating independent ZTurf Equipment dealer. Apply online or visit your participating ZTurf Equipment dealer today.

PARTS AND SERVICE

Whether you perform your own maintenance or rely on our network of servicing dealers, we have you covered with OEM parts from ZTurf Equipment.

WHAT'S NEW FOR 2021

Z Turf Equipment has expanded our turf management lineup adding the Z-Aerate 24- and 30-inch machines along with the Z-Seed 20-inch slicer seeder.

**LEAN-TO-STEER.
EASY TO MANEUVER.
IMPROVED PROFITABILITY.**

The Z-Spray LTS spreader-sprayer is one of the most advanced machines in its category. Extremely easy to operate and maneuver, it features our most advanced lean-to-steer technology, outstanding versatility and amazing stability—even on hillsides. Couple that with outstanding durability and you have a spreader-sprayer that is built to last.

LEAN-TO-STEER TECHNOLOGY
Enables the operator to control speed and direction with one hand, which frees the other hand to adjust spread or spray controls, or perform spot treatments with the easy access spray wand. The intuitive control layout makes the machine easy to operate and make adjustments on the fly.

PROFITABILITY
The 2-in-1 capabilities of the LTS gives operators the choice to spread granular or spray liquid fertilizer with each pass of the machine. With the ability to cover more properties in less time, operators can be more profitable.

COMPACT DESIGN
With only a 36-inch footprint, this nimble commercial spreader-sprayer is the perfect size for gated communities and other hard to reach areas.

FEATURES

LARGE HOPPER CAPACITY
The large hopper can hold 175 pounds and is equipped with a soft, easy-to-remove cover. The carrier on top of the tank can also hold an extra 50-pound bag of dry material for the spread system.

AGITATION SYSTEM
The in-tank agitation system keeps materials in suspension for even more, consistent coverage. This allows operators to use a wider range of materials, from flowable solids to wettable powders.

STABILITY
Designed for performance, the 53-inch turning radius of this machine also provides operators outstanding stability—even on uneven terrain.

SPRAY TANK
For greater efficiency, a single 20-gallon tank, with one fill location, keeps you spraying longer with fewer fill-ups.

PRODUCTIVITY

DIGITAL CONTROLS
The Z-Spray LTS spreader-sprayer offers digital spread and spray controls for easier, more precise application settings. These controls increase application precision, for optimal results and reduced material waste. Constant agitation in the tank ensures materials are kept in suspension for consistent spray performance, even when using wettable powders and other dry-flowable materials.

LEGENDARY STRENGTH. INCREASED MANEUVERABILITY. PRODUCTIVITY MEANS PROFITABILITY.

AERATION TIMING

WHY AERATE:

Along with mowing, watering, fertilizing and pest control, aeration is an important part of turf care. While there are several different types of aeration, hollow tine or "core" aeration is the most common technique for residential and commercial properties.

There are a number of reasons to core aerate, but the main benefits are to:

1. Relieve compaction—Compacted soil reduces the amount of pores, which are essential for gas exchange and water retention.
2. Improves gas exchange—Gas exchange is critical for proper root respiration. The more pores available for oxygen, the healthier the root system.
3. Improves soil drainage—Improved drainage means that more water is percolating into the soil from natural precipitation or irrigation. This means less run-off and more water getting to where it needs to go. Poor soil drainage also increases the possibility for disease.

Bottom line: Aeration improves the overall health of the turf.

WHEN TO AERATE:

The best time to aerate depends upon the type of turf. Aeration should occur during periods of active growth to help with the recovery. Typically, warm season grasses are aerated in late spring and early summer. The ideal time to aerate cool season grasses is early fall, but they can also be aerated in spring. Aeration should be done before application of pre-emergents.

Aeration should be avoided at certain times. For example, cool season grasses should never be aerated during times of high stress (summer). Warm season grasses should not be aerated preceding dormancy (fall).

Z-AERATE 30-INCH

Outfitted with intuitive controls, the Z-Aerate 30-inch is incredibly easy to operate just about anywhere. And, working at speeds up to 7 mph, it enables operators to aerate more than 1.8 acres per hour.

Z-AERATE 24-INCH

Our compact Z-Aerate 24-inch gives operators even more maneuverability making it possible to access smaller yards, more quickly—without operator fatigue. With drive speeds up to 6.8 miles per hour, it can aerate nearly 1.4 acres per hour.

Productivity is the key to profitability for your business, and our aerators cover from one to two acres per hour with intuitive controls, maneuverability and straightforward operation. With the unmatched productivity of our stand-on aerators, Z Turf Equipment delivers top-notch performance, durability and ease of use.

INTUITIVE CONTROLS

The simple, intuitive controls—similar to commercial mowers—give landscape pros easy operation, zero-turn agility, precise control and fatigue-reducing ergonomics.

COMMERCIAL DURABILITY

Equipped with commercial-grade engines, these sturdy and durable machines are built to last and deliver the performance you need time after time.

GO ANYWHERE

The Z-Aerate 24-inch has a total width of 35.5-inches, giving it the ability to fit through a 36-inch gate. This makes it possible to access more yards, quicker, without the fatigue typically experienced with a small walk-behind aerator.

ELECTRONIC DEPTH CONTROL

With the ability to easily set tine depth between 0.5" and 5", the patented Electronic Depth Control allows operators to maintain consistent core quality around a property.
(24- and 30-inch only)

SPREADER ATTACHMENT

With an 80-lb. seed capacity, the spreader attachment enables landscape pros to offer over-seeding in conjunction with aeration programs. The versatility significantly increases the productivity in revenue potential of the machine.

PRODUCTIVITY LEADS TO PROFITABILITY

Drive speeds up to 7 mph allow operators to aerate more than 1.8 acres every hour.* Therefore, businesses can aerate more properties, in less time, to become even more profitable.

REDUCED OPERATOR FATIGUE

Enhancing both productivity and profitability, our ergonomically designed, stand-on aerators are less taxing to operate. The full-floating platforms on these machines adjust ride comfort to the weight of the operator, increasing comfort and decreasing fatigue.

EXCEPTIONAL CORE QUALITY

Our models feature durable, heavy-duty, self-cleaning tines and pull 4.6 quality plugs per square foot. Our stand-on's hydraulic down-pressure can be used to pull up to five-inch plugs.

*Productivity based on 80% efficiency rating. See back for more details.

THREE-IN-ONE.
IMPROVED GERMINATION.
COMMERCIAL GRADE.

Engineered to verticut, dethatch and overseed with every pass, ZTurf Equipment's 20-inch Z-Seed makes it easier than ever to realize better results—and greater efficiency.

WHY SEED

WHY USE A SLICER SEEDER:
A slicer seeder, or slit-seeder, is ideal for overseeding established lawns. It cuts through the thatch layer and into the soil after dropping the seed, which boosts seed-to-soil contact. This puts the seed in a far better position to germinate and begin root development, increasing the success of overseeding operations.

WHEN TO OVERSEED:
In the northern U.S., overseeding is most commonly performed in the early fall and spring, while in the south, summer overseeding is typically the standard. Overseeding should take place during periods of active growth. With cool-season turf varieties, it's best to avoid overseeding in the hottest parts of the season. Overseeding warm-season grasses in the summer often delivers the best results because of their need for increased soil temperature for successful germination.

LARGE-CAPACITY SEED HOPPER
With its 40-pound seed hopper, our Z-Seed can help you handle big jobs without constantly stopping for more seed. So you get done faster.

COMMERCIAL-GRADE PROFITABILITY
We know that landscape pros' livelihoods revolve around increasing service offerings in an effort to maximize profitability, and our 3-in-1 Z-Seed will help them do just that.

DURABLE STEEL BLADES
High-carbon steel blades remove thatch while providing maximum seed-to-soil contact. This enables superior germination for a healthy, great-looking lawn.
